2# Create Your First App

What you'll do:

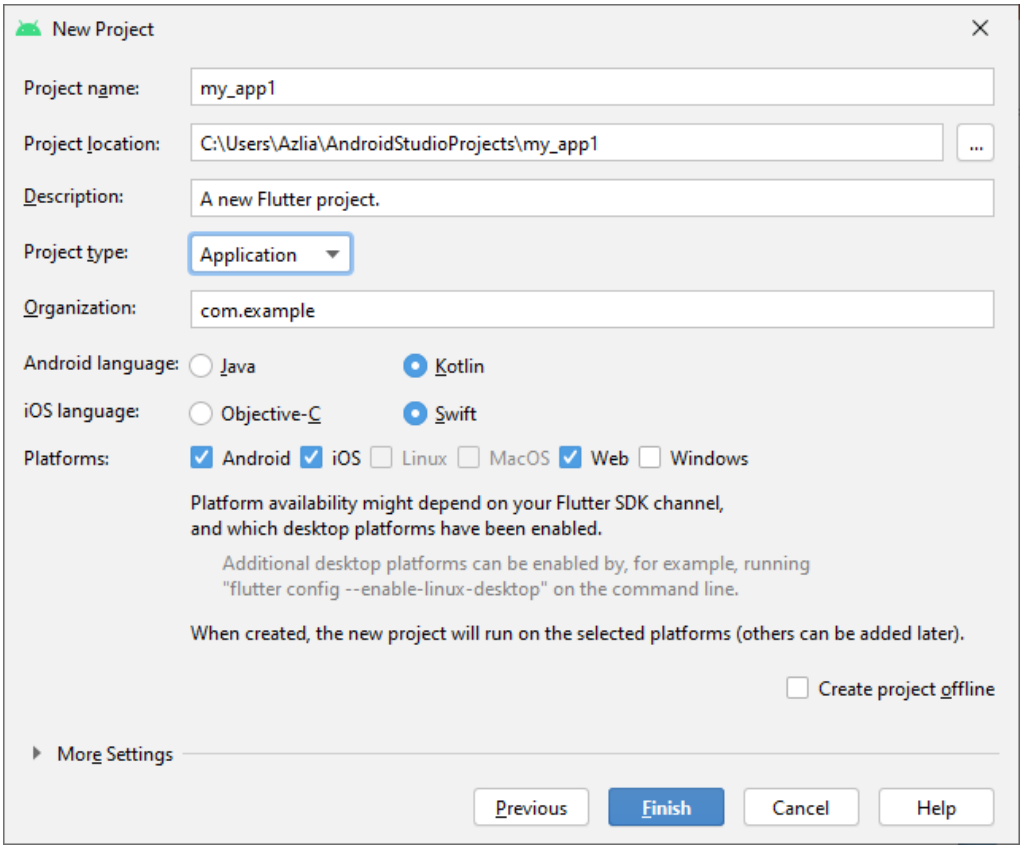

- Create a new Flutter project in Android Studio
- Create a new Flutter project in Visual Studio Code.
- Run your first apps on emulator.

Project 1: Create a New Flutter Project in Android Studio

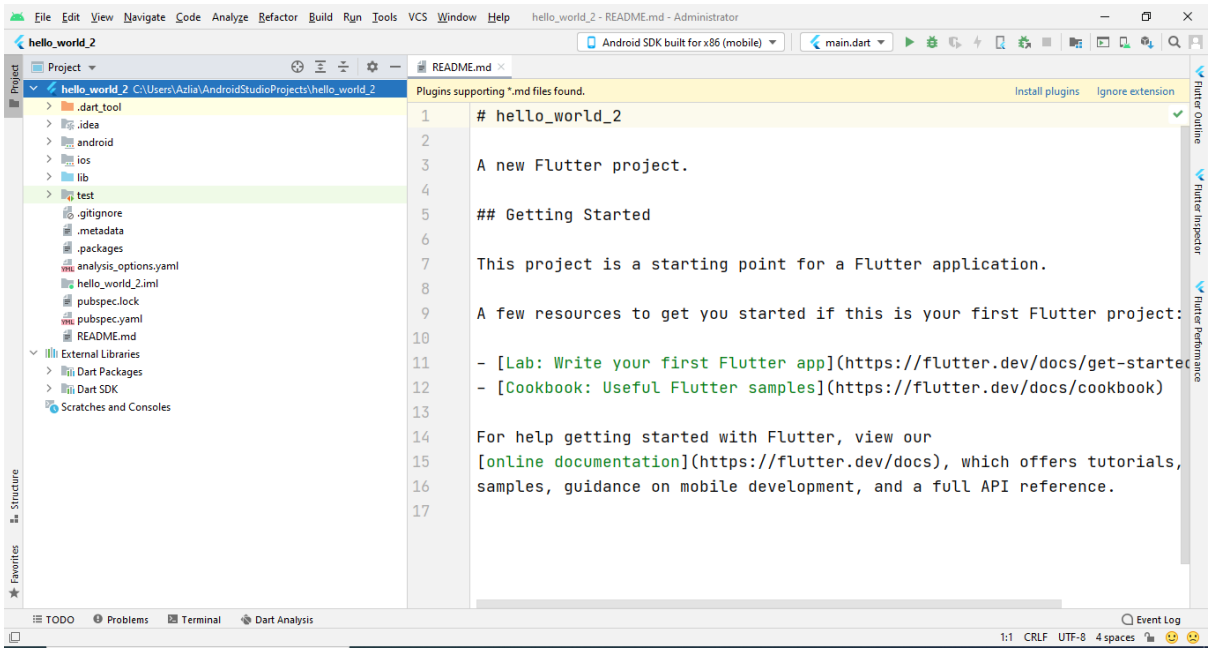

1. Create a new Flutter project. File > New Flutter Project.
2. Set the Flutter SDK path > Next.

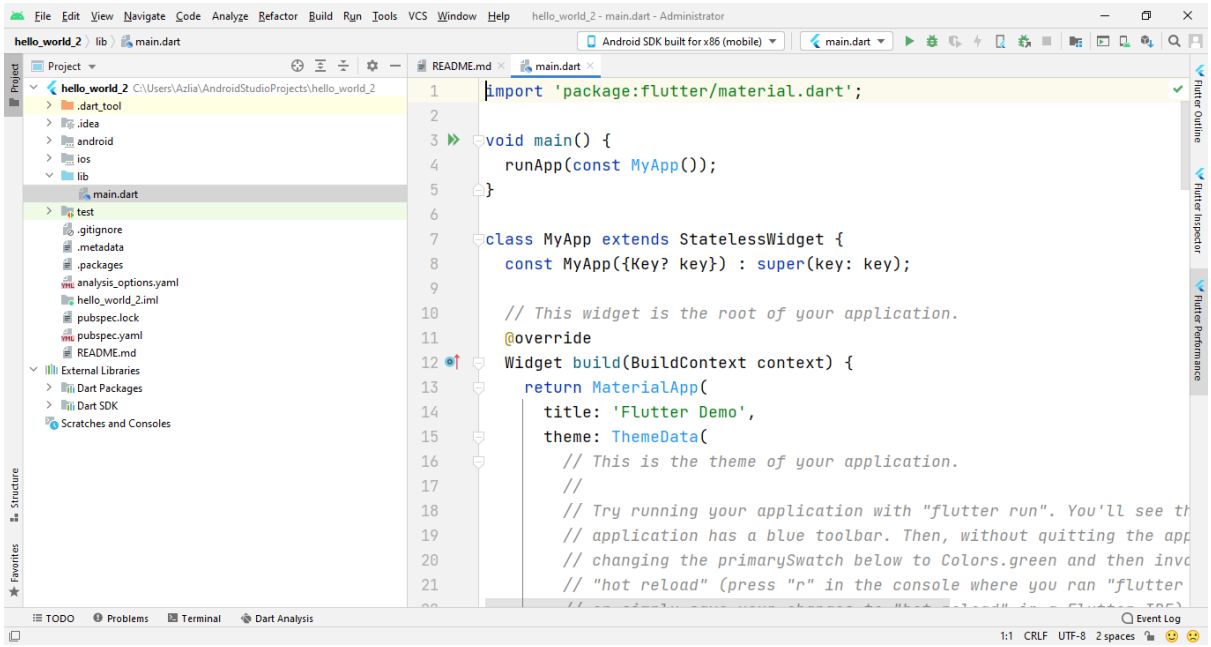

3. Give a project name: my_app1. Set your project location then click button Finish.

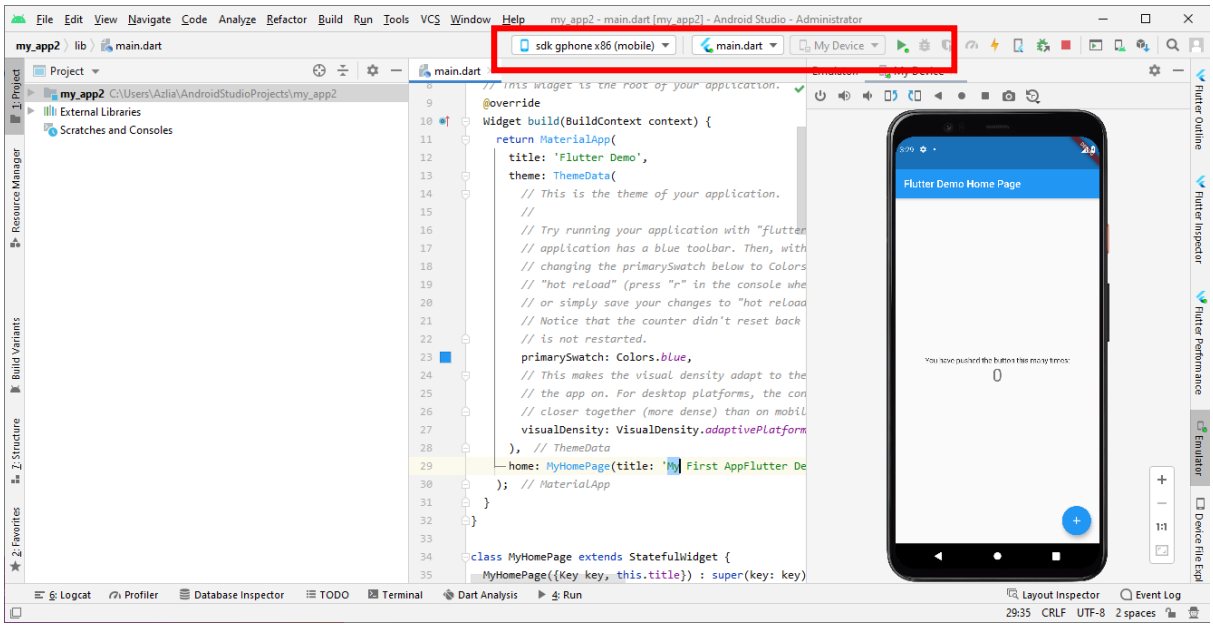

4. The default view:

5. See the code for app in lib/main.dart.

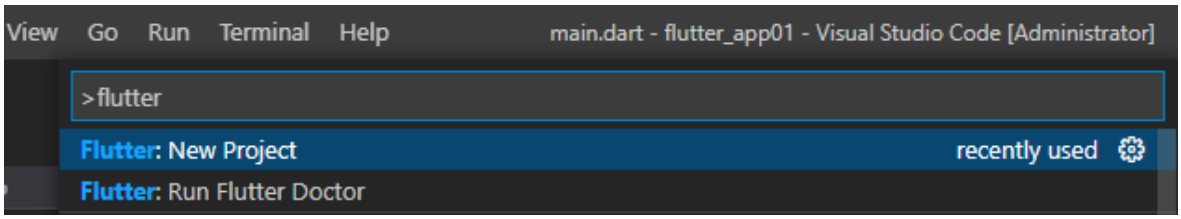

6. See the device and select your working emulator. Then, run your application.
7. Sample output:

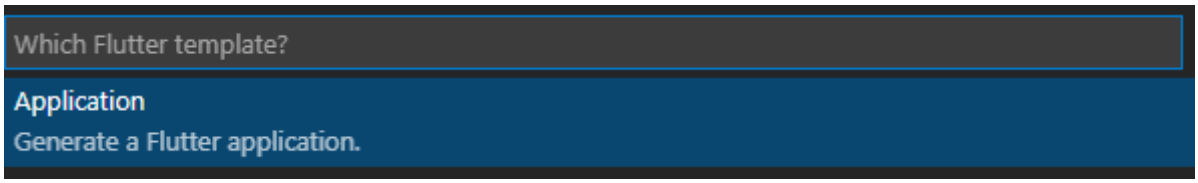

Project 2: Create a New Flutter Project in Visual Studio Code

1. Open Visual Studio Code.
2. Invoke View tab > Command Palette. Type “flutter”, and select the Flutter: New Project.

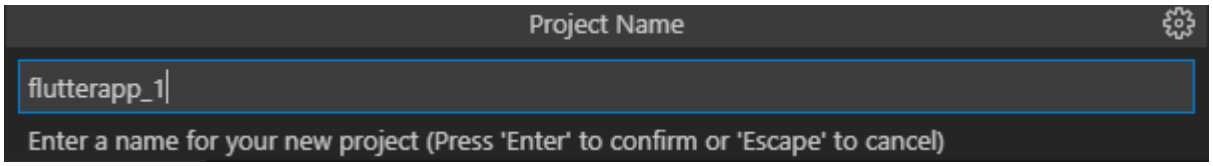

3. Select Application.

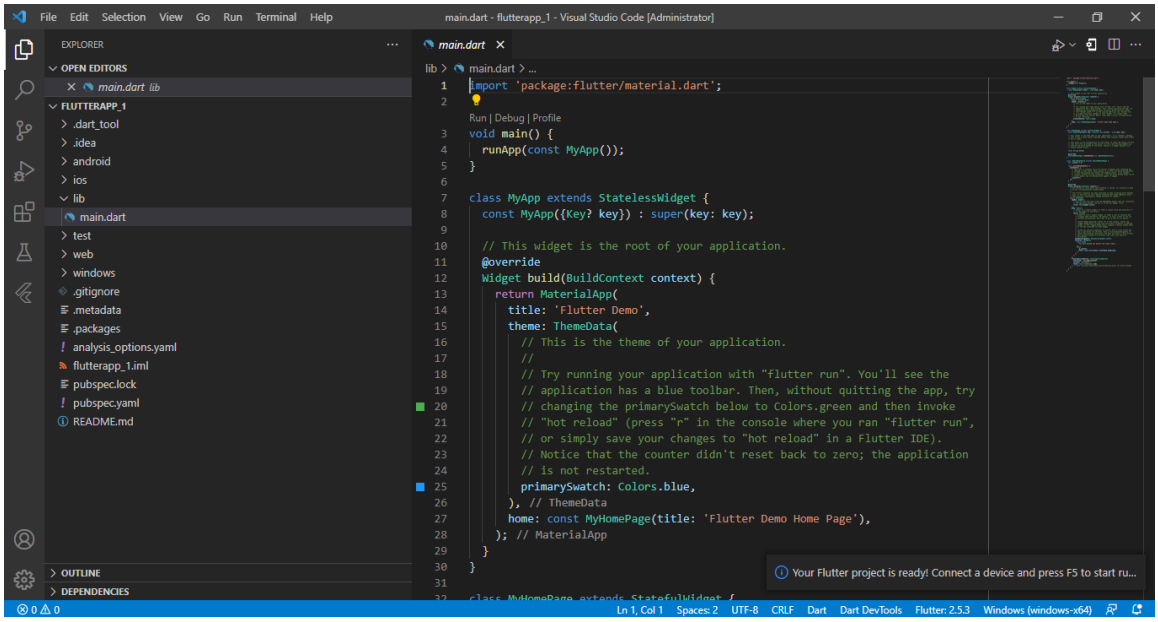

4. Create or select the parent directory to store your project. E.g. C:\Users\Azlia\AndroidStudioProjects

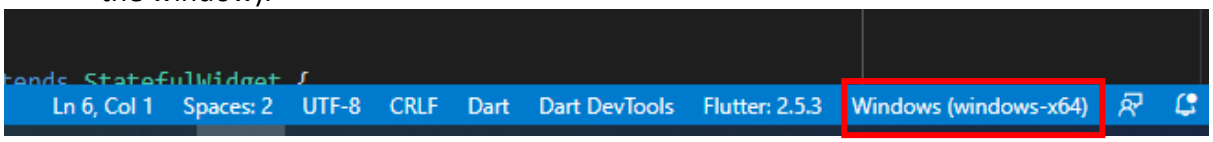

5. Enter a project name, e.g. flutterapp_1, and press Enter.

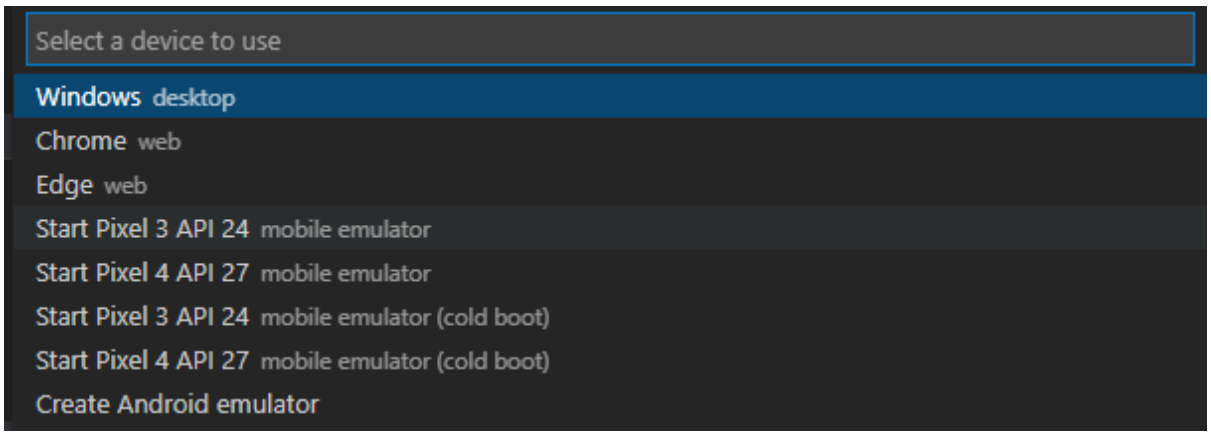

6. Wait for project creation to complete and the main.dart file to appear. The default view:

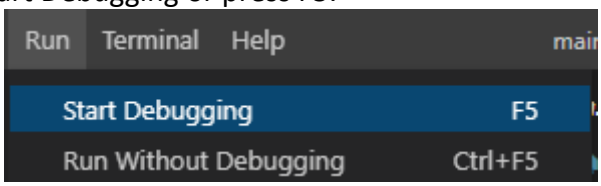

7. Run the application by locate the VS Code status bar (the blue bar at the bottom of the window).

8. Select a device from the Device Selector area. If no device is available, click No Devices and launch a simulator.

9. Invoke Run > Start Debugging or press F5.

10. Wait for the app to launch – see the progress in the Debug Console view.
11. Sample run also similar to Android emulator. Other sample run on Chrome web:
