3# Create a Simple Flutter App

What you'll do:

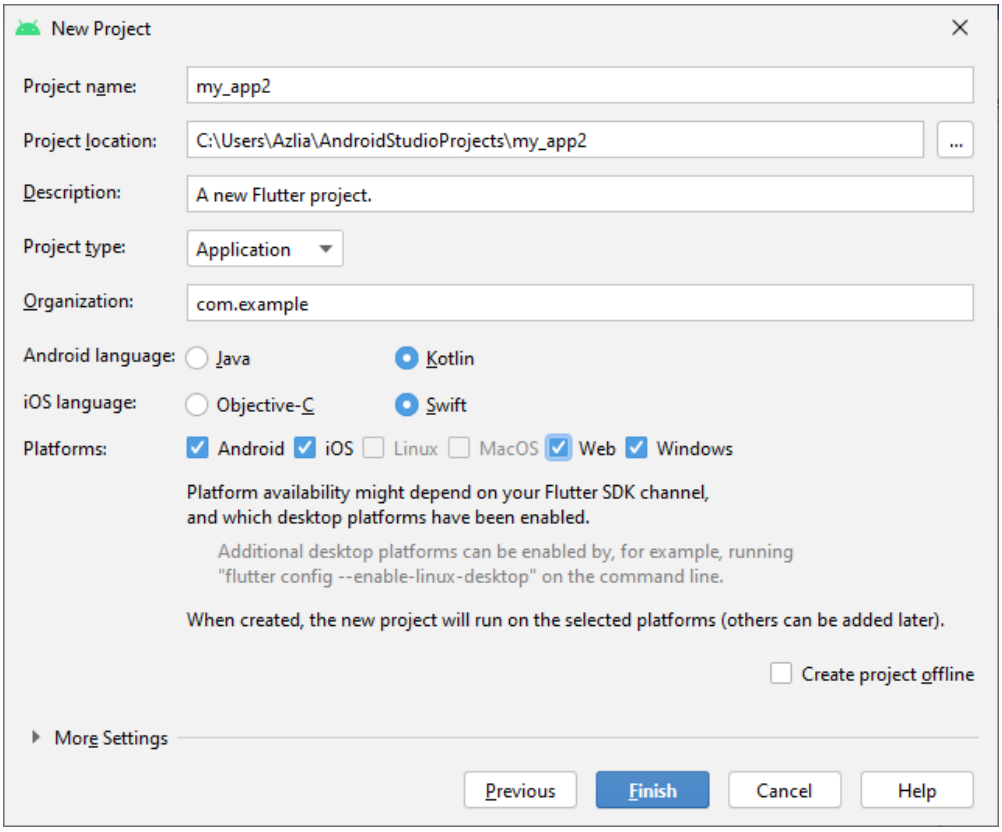

- Create a simple Flutter project in Android Studio.
- Try the Hot Reload function

Project 1: Simple editing on Flutter project

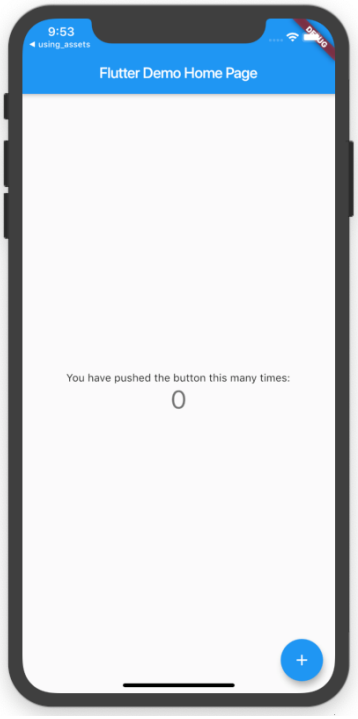

1. Create a new Flutter project.

2. Give a project name e.g. my_app2. Set your project location then click button Finish.

3. Run your application by selecting your devices. Sample output:

4. Simplify your apps by replace the following codes into main.dart:

```dart
import 'package:flutter/material.dart';

void main() => runApp(const MyApp());

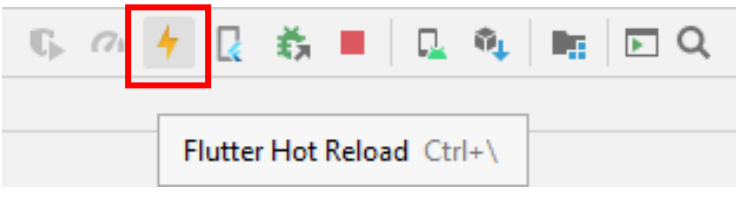

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Welcome to Flutter',
      home: Scaffold(
        appBar: AppBar(
          title: const Text('Welcome to Flutter'),
        ),
        body: const Center(
          child: Text('Hello World'),
        ),
      ),
    );
  }
}
```

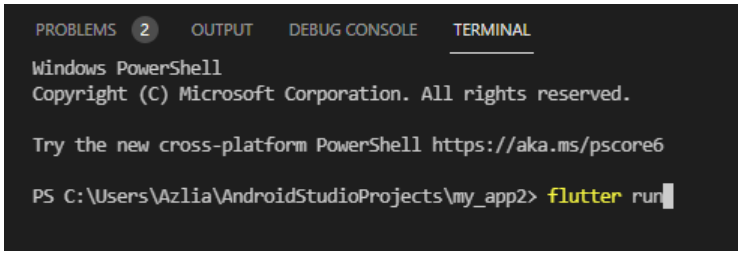

References:

- **Material is a visual design language that is standard on mobile and the web.**
- **The main() method uses arrow (=>) notation. Use arrow notation for one-line functions or methods.**
- **The app extends StatelessWidget, which makes the app itself a widget.**
- **The Scaffold widget, provides a default app bar.**
- **The body property holds the widget tree for the home screen.**
- **A widget's main job is to provide a build() method that describes how to display the widget in terms of other, lower level widgets.**
- **The body for this example consists of a Center widget containing a Text child widget. The Center widget aligns its widget subtree to the center of the screen.**

i) Click at the Hot Reload icon for quick updates. If you are working in VS Code, you can start debugging (F5) or run in Terminal > flutter run. To use the Hot Reload, type r in Terminal.

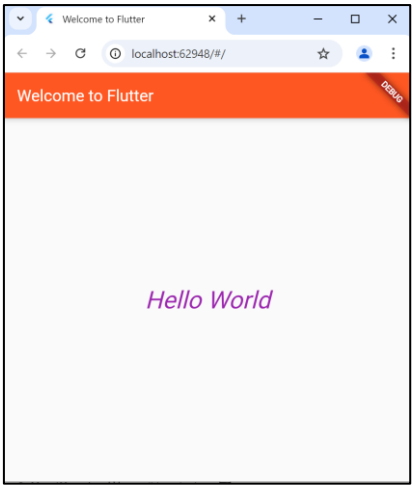

ii) Give a theme and text style – to change the text colour and size:

```
class my_app2 extends StatelessWidget {
 @override
 Widget build(BuildContext context) {
   return MaterialApp(
     title: 'Welcome to Flutter',
     theme: ThemeData(primarySwatch: Colors.deepOrange),
     home: Scaffold(
       appBar: AppBar(
         title: const Text('Welcome to Flutter'),
       ),
       body: const Center(
         child: Text(
           'Hello World',
           style: TextStyle(
               color: Colors.purple,
               fontSize: 30,
               fontStyle: FontStyle.italic),
         ),
       ),
     ),
   );
 }
}
```

Sample run:

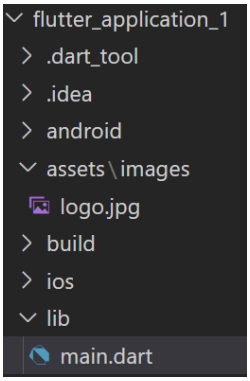

Challenges:

1. Create a simple app name: **KIDS2U App**.
2. Design your apps:

3. Steps:
   i) Add new folder name assets/images. Place your images here (e.g., logo.jpg):

ii) Open pubspec.yaml. Add the following codes:

```
  assets:
  - assets/images/logo.jpg
```

iii) Open the main.dart file and replace the following codes:

```dart
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}

class MyApp extends StatelessWidget {
  const MyApp({super.key});

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'My First Application',
      theme: ThemeData(
        primarySwatch: Colors.deepOrange,

      ),
      home: const MyHomePage(title: 'KIDS2U App'),
    );
  }
}

class MyHomePage extends StatefulWidget {
  const MyHomePage({super.key, required this.title});

  final String title;

  @override
  State<MyHomePage> createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {
```

```
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        title: Text(widget.title),
      ),
      body: Center(
        child: Column(
          mainAxisAlignment: MainAxisAlignment.center,
          children: [
            Text(
              'Welcome to All Parents and Kids\n',
              style: TextStyle(color: Colors.purple, fontSize:
24),
            ),
            Image.asset('images/logo.jpg', height: 400, width:
300,),
             FloatingActionButton.extended(
              label: Text('LOGIN NOW'), // <-- Text
              backgroundColor: Colors.orange,
              onPressed: () {},
            ),

          ],
        ),
      ),

    );
  }
}
```
