FACULTY OF ENGINEERING, BUILT ENVIRONMENT, AND INFORMATION TECHNOLOGY (FOEBEIT)

BCL1344/BTL1344/BIT1344 - WEB AND MOBILE SYSTEMS

LAB ASSESSMENT

WIREFRAME DESIGN (20%)

INSTRUCTIONS TO CANDIDATE:

1. This is an **INDIVIDUAL** assessment.
2. This assignment contributes **20%** of the total course mark.
3. Submit your completed assessment via **SPARK** by **30 October 2026**.

WARNING

You are required to submit your work within the bounds of the University Infringement of Assessment Regulations. Plagiarism, paraphrasing and downloading large amounts of information from external sources will not be tolerated and will be dealt with severely.

SEGi University, Kota Damansara takes allegations of plagiarism very seriously. Submissions involving plagiarism will be marked but given zero mark. Plagiarism is the attempt to pass off the work of another as your own. Information taken from the work of others should be acknowledged by reference to obviate the charge of copying.

The work must be entirely your own. You will receive ZERO (0) for work that is not your own. The safety of your assessments is your responsibility. You must not permit another student access to your work.

OBJECTIVE

This assessment aims to enhance students' ability to translate application concepts into structured, responsive visual designs prior to the development stage. Through this activity, students will develop skills in visual communication, logical information flow, and creative interface design, which are essential for modern web and mobile application development.

LEARNING OUTCOMES

Upon successful completion of this assessment, students will be able to:

1. Design a wireframe that represents the core structure and functionality of a digital application system.
2. Illustrate user interaction flows for key application features in a structured manner.
3. Communicate design concepts effectively through visual representation and concise explanations.

TASK DESCRIPTION

You are required to design a wireframe for a **Smart Campus Companion Application** that supports university students in managing their daily campus activities and accessing essential university services. The application should provide an intuitive and user-friendly interface that enables students to explore campus facilities, manage their academic schedules, discover campus events, and access relevant student services.

This assignment aims to develop your ability to translate user requirements into visual interface designs before the actual software development process begins. You may use an appropriate wireframing or prototyping tool, such as Figma, Excalidraw, Miro, or another suitable tool.

REQUIREMENTS

Your wireframe must contain at least **TEN (10) frames** representing the core functions of the application. The frames should collectively demonstrate the following features:

1. User Login and Profile
2. Home Dashboard
3. Academic Timetable
4. Campus Navigation
5. Facility & Services
6. Campus Events
7. Announcements and Notifications

Additional Design Requirements

1. Label every frame clearly.
2. Show the navigation flow between related screens using arrows or connectors.
3. Include appropriate interface elements, such as buttons, menus, icons, input fields, and navigation bars.
4. Provide brief annotations explaining the purpose of each frame and its key interactions.
5. Maintain consistency in layout, typography, spacing, and visual hierarchy.

SUBMISSION REQUIREMENTS

Submit the following:

1. Wireframe design - a minimum of ten clearly labelled frames.
2. User interaction flow - visual diagram showing users navigation.
3. Design annotations – a brief explanations of the purpose and key interactions of the frames.
4. Supporting documentation - a short description of the application concept, intended users, and key design decisions.
5. Submission format – PDF file format.

ASSESSMENT CRITERIA

Component	Description	Marks
Layout & Structure	Logical screen organisation, navigation flow, and clarity of screen sequence.	40%
Visual Design & Creativity	Creativity, consistency, visual hierarchy, and usability of the interface.	20%
Feature Representation	Coverage and appropriateness of the required application features.	20%
Annotation & Clarity	Quality of frame labels, interaction explanations, and design annotations.	10%
Documentation & Submission Quality	Completeness, organisation, formatting, and submission requirements.	10%
	Total	**100%**
