

BCL1233 – SYSTEM ANALYSIS AND DESIGNS

ASSIGNMENT 1 (MARKING RUBRIC)

Assessment Component	Excellent (80–100)	Good (60–79)	Satisfactory (40–59)	Weak (0–39)	Marks
Problem Analysis (20%)	Accurately identifies and thoroughly analyses two problems. Demonstrates clear understanding of impacts on employees, managers, and organisational efficiency with well-supported explanations.	Identifies two relevant problems and provides good analysis of their impacts with minor omissions or limited depth.	Identifies problems but analysis is basic, incomplete, or lacks clear links to stakeholders and organisational impact.	Problems are poorly identified, inaccurate, or analysis is minimal and unclear.	
System Objectives (20%)	Proposes five clear, relevant, and well-justified objectives that align strongly with the identified problems and system needs.	Proposes five relevant objectives with adequate explanations and reasonable alignment to system needs.	Objectives are partially relevant, lack clarity, or have limited connection to identified problems.	Objectives are unclear, irrelevant, incomplete, or poorly explained.	
Stakeholder Analysis (10%)	Correctly identifies five stakeholders, clearly classifies their involvement, and thoroughly explains their roles and responsibilities.	Identifies most stakeholders correctly and provides adequate explanation of roles and involvement.	Identifies some stakeholders but explanations of roles and responsibilities are limited or partially accurate.	Stakeholders are incorrectly identified or roles are poorly explained.	
System Requirements (20%)	Specifies complete and accurate functional and non-functional requirements with clear descriptions and appropriate classification.	Requirements are mostly correct and adequately described with minor omissions or inaccuracies.	Requirements are basic, incomplete, or lack sufficient detail and classification.	Requirements are unclear, inaccurate, or largely missing.	
Requirement Gathering Technique	Selects an appropriate technique with strong justification and a	Selects a suitable technique and provides	Technique is identified but justification or	Technique is inappropriate, poorly justified, or	

(10%)	clear explanation of its application in requirement collection.	adequate justification and explanation.	application process lacks detail or relevance.	inadequately explained.	
System Function Description (10%)	Provides a clear, complete, and well-structured description of the selected function, including all required components.	Describes the function adequately with most required components included.	Description is partially complete with limited clarity or missing components.	Description is unclear, incomplete, or lacks key process details.	
System Failure Prevention (10%)	Demonstrates excellent understanding of requirement analysis and critically evaluates its role in reducing system failure.	Demonstrates good understanding with adequate discussion of its importance in preventing failure.	Provides basic explanation with limited discussion or evaluation.	Explanation is unclear, inaccurate, or lacks understanding of the topic.
