

BCL1233 – SYSTEM ANALYSIS AND DESIGNS

ASSIGNMENT 2 (MARKING RUBRIC)

Assessment Component	Excellent (80–100)	Good (60–79)	Satisfactory (40–59)	Weak (0–39)	Marks
Context Diagram (15%)	Clearly defines system boundary with accurate external entities and complete, well-labelled data flows. Diagram is neat, balanced, and fully consistent with case study.	Minor issues in labeling or completeness. System boundary and entities are mostly correct with good clarity.	Basic diagram with some missing entities or unclear data flows. Limited consistency with system context.	Incorrect or incomplete diagram. Poor understanding of system boundary and external entities.	
DFD Level 0 (25%)	All processes, data stores, external entities, and data flows are correctly identified. Fully balanced with Context Diagram. Clear, logical, and well-structured model.	Mostly correct DFD with minor errors in data flow or process structure. Good overall logic.	Partial DFD with missing elements or weak logical flow. Some inconsistencies with Context Diagram.	Incomplete or incorrect DFD. Poor understanding of processes and data flow concepts.	
DFD Level 1 (25%)	Excellent decomposition of selected process into detailed subprocesses. Clear, logical, and complete data flow representation.	Good decomposition with minor missing subprocess details or small logical issues.	Basic decomposition with limited detail and weak flow structure.	Incorrect or missing decomposition. No clear understanding of process breakdown.	
Use Case Diagram (20%)	All actors and use cases correctly identified. Relationships (include/extend/generalization) are correctly applied and clearly presented. Diagram is neat and complete.	Minor missing actors/use cases or slight errors in relationships. Diagram is generally correct.	Some actors or use cases missing. Relationships are weak or partially incorrect.	Major errors in actors/use cases. Diagram unclear or incorrect.	
Use Case Description (15%)	Complete and well-structured description including all required elements (name, actors, preconditions, trigger, main flow, alternative flow, postconditions).	Mostly complete with minor missing elements or limited clarity in flow.	Basic description with missing components or unclear process flow.	Incomplete or incorrect description. Missing key elements.
