

**FACULTY OF ENGINEERING, BUILT ENVIRONMENT, AND
INFORMATION TECHNOLOGY (FOEBEIT)**

BACHELOR OF COMPUTER SCIENCE (BCS-ODL)

BCL1233 – SYSTEM ANALYSIS AND DESIGN

ASSIGNMENT 1

Requirement Analysis for a Hybrid Work Monitoring System

INSTRUCTIONS TO CANDIDATE:

1. This is an **INDIVIDUAL** assessment.
2. This assignment contributes **20%** of the total course mark.
3. Submit your completed assessment via **SPARK by 11:59 PM on 20 June 2026.**

WARNING

You are required to submit your work within the bounds of the University Infringement of Assessment Regulations. Plagiarism, paraphrasing and downloading large amounts of information from external sources will not be tolerated and will be dealt with severely.

SEGi University, Kota Damansara takes allegations of plagiarism very seriously. Submissions involving plagiarism will be marked but given zero mark. Plagiarism is the attempt to pass off the work of another as your own. Information taken from the work of others should be acknowledged by reference to obviate the charge of copying.

The work must be entirely your own. You will receive ZERO (0) for work that is not your own. The safety of your assessments is your responsibility. You must not permit another student access to your work.

LEARNING OUTCOMES

CLO 1: Analyse user and system requirements using various requirement analysis techniques.

OBJECTIVE

This assessment aims to evaluate students' ability to:

1. Identify and analyse problems in an existing system
2. Determine system objectives based on user requirements
3. Identify stakeholders and their roles
4. Specify functional and non-functional system requirements
5. Apply appropriate requirement gathering techniques
6. Demonstrate understanding of requirement analysis in system development

CASE STUDY: Hybrid Work Monitoring System

A technology company has adopted a hybrid working model where employees work either from home or the office. Currently, the company uses manual tools such as spreadsheets, chat messages, and emails to track employee attendance, task updates, and work progress. This approach has led to several issues, including:

1. Inaccurate attendance tracking
2. Lack of real-time work visibility
3. Difficulty in monitoring task progress
4. Communication delays between employees and managers
5. No centralized reporting system

To address these issues, the company plans to develop a **Hybrid Work Monitoring System**. The proposed system will:

1. Allow employees to digitally check in and check out
2. Record work location (remote or office)
3. Enable task assignment and tracking
4. Provide real-time work status updates
5. Generate attendance and productivity reports
6. Send notifications for tasks and meetings
7. Provide a management dashboard

TASK DESCRIPTIONS

Students are required to perform a complete **Requirement Analysis Report** based on the given case study. You must act as a system analyst to investigate the current situation and propose system requirements for the new system. Your analysis must include identification of existing problems, definition of system objectives, stakeholder analysis, system requirements specification, and selection of requirement gathering technique.

REPORT REQUIREMENTS

Students must prepare a structured report and respond to ALL sections below.

1. Problem Analysis (20 marks)

- a) Identify **TWO (2)** problems in the current manual system.
- b) Analyze each problem in terms of its impact on employees, managers, and organization.

2. System Objectives (20 marks)

- a) Propose and explain **FIVE (5)** objectives of the Hybrid Work Monitoring System.

3. Stakeholder Analysis (10 marks)

- a) Identify **FIVE (5)** stakeholders involved in the system.
- b) Classify each stakeholder according to their role and involvement.
- c) Describe the responsibility of each stakeholder within the system context.

4. System Requirements (20 marks)

- a) Specify **THREE (3)** functional requirements describing system behaviour or functions.
- b) Specify **TWO (2)** non-functional requirements based on system quality attributes.

5. Requirement Gathering Technique (10 marks)

- a) Select **ONE (1)** suitable requirement gathering technique for the system.
- b) Justify its suitability in relation to the system context.
- c) Explain its application in collecting system requirements.

6. System Function Description (10 marks)

- a) Select **ONE (1)** system function from the proposed system.
- b) Describe the process flow in a structured format including:
 - Function specification
 - User roles involved
 - Pre-conditions
 - Sequential process flow
 - Post-condition / output result

7. System Failure Prevention (10 marks)

- a) Discuss the importance of requirement analysis in system development and evaluate its role in minimizing system design and implementation failures.

EVALUATION CRITERIA

Assessment Component	Description	Mark Allocation
Problem Analysis	Identification and analysis of problems in the current system, including their impact on employees, managers, and organisational efficiency.	20%
System Objectives	Relevance, clarity, and justification of the proposed system objectives.	20%
Stakeholder Analysis	Correct identification, classification, and explanation of stakeholder roles and responsibilities.	10%
System Requirements	Completeness and correctness of functional and non-functional requirements.	20%
Requirement Gathering Technique	Appropriateness of the selected technique and clarity in explaining its application.	10%
System Function Description	Clarity, accuracy, and completeness of the selected system function process flow.	10%
System Failure Prevention	Understanding of the importance of requirement analysis and its role in reducing system failure.	10%
TOTAL:		100%

SUBMISSION REQUIREMENTS

Students are required to submit the following upon completion of this assessment:

1. A complete report in **Word or PDF format**.
2. Structured answers covering all tasks and questions.
3. Clear headings and proper formatting for each section.
4. Optional diagrams or illustrations (if needed for explanation).
5. Submission must be uploaded via **SPARK** on or before the given deadline.
